ALIANT ULTRALIGHT BATTERY È UN PRODOTTO BY ELSA SOLUTIONS srl – VIA P. PATARINI 15 - 40026 IMOLA (BO) – ITALY Ph. +39 800 132 166 - Cod. Fisc. 02335150377 - P.IVA 00571441203 - Iscr. Trib. n.33973 - C.C.I.A.A n.272440

SECTION 1: Identification of the product and of the company				
Product Name	Product Name Rechargeable Lithium-Ion Battery			
Product Models	Product Models All EK Series models			
Manufacturer ELSA Solutions srl				
Uses of the product Rechargeable electric battery for industrial uses				
Address Via Patarini, 15 Imola (BO), Italy				
	Telephone Number +39 800132166			
Emergency Telephone Centro Antiveleni Milano Niguarda – 0266101029				
Numbers 24/7Or else contact local Poison Centers.				

SECTION 2: Hazards identification

Lithium-Ion Batteries described in this Material Safety Data Sheet are sealed units, which are classified as an "article".

As stated by Article 7, paragraph 3 of the European Regulation 1907/2006, articles whose components are not meant to be released during normal usage¹. Hence, producers are not asked to classify their articles as stated by Article 4, paragraph 2 by the European Regulation 1272/2008². The hazards are associated with the internal components of the battery: under normal conditions of use, the solid electrode materials and Gel electrolyte are non-reactive. Keeping the battery and the seals intact will provide the internal components from spilling out: in case of leakage, the chemicals are classified as Hazardous.

In case of unavailable or incomplete information, it is highly recommended to follow the precautionary principle.

principie.			
Physical Hazards	A leakage of the chemicals inside might be inflammable or corrosive.		
Health Hazards	A leakage of the chemicals inside might be irritating. Gasses produced by a Lithium-Ion		
	battery fire might be toxic.		
Environmental	A damaged battery might leak chemicals such as the electrolyte LiFP ₆ and Copper (Cu)		
Hazards	and Aluminum (Al) dust, which are harmful to the environment.		
Specific Hazards	A leakage of the chemicals inside might cause burn to the skin, eyes and mucous		
	membranes and may cause sensitization by skin contact.		
Main Symptoms	Symptoms include itching, burning, redness and tearing.		
Pictograms			
Signal Words	Danger		
Hazard	Below hazards refer to a leakage or a rupture of the battery.		
Statements			
H203 Explosive; fire	, blast or projection hazard.		
H228 Flammable so	lid.		
H261 In contact with water releases flammable gases.			
H270 May cause or intensify fire; oxidizer.			

¹ European Regulation 1907/2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH)

² European Regulation 1278/2008 on classification, labelling and packaging of substances and mixtures, amending and repealing Directive 67/548/CEE and 1999/45/EC, and amending Regulation (EC) No 1907/2006

File: MSDS_EK_DG_EN_2.1.doc - Printed on February 25, 2022 @ 12:01 PM by DDD ALIANT ULTRALIGHT BATTERY È UN PRODOTTO BY ELSA SOLUTIONS srl – VIA P. PATARINI 15 - 40026 IMOLA (BO) – ITALY

Pg. **2-14**

H302 Harmful if swa	llowed.
H312 Harmful in con	tact with skin.
H314 Causes severe	skin burns and eye damage.
H315 Causes skin irr	itation.
H319 Causes serious	eye irritation.
H400 Very toxic to ac	luatic life.
Precautionary	Precautionary statements below refer to a leakage or a rupture of the battery.
statements	
P102 Keep out of rea	ch of children.
P201 Obtain special i	nstructions before use.
P210 Keep away from	n heat, hot surface, sparks, open flames and other ignition sources. No smoking.
P232 Protect from m	
	to grinding/shock/friction/
-	r burn, even after use.
	dust/fume/gas/mist/vapor.
÷ ;	ves, on skin, or on clothing.
P273 Avoid release to	
=	e gloves/protective clothing/eye protection/face protection.
P313 Get medical adv	
	ge, eliminate all ignition sources.
	SWALLOWED, rinse mouth. Do NOT induce vomiting.
	IF ON SKIN (or hair): Take off immediately all contaminated clothing.
Rinse SKIN with wate	
	F IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if
present and easy to d	
	rritation occurs: Get medical advice/attention.
	case of fire: Evacuate area. Fight fire remotely due to the risk of explosion.
Precautionary	Below precautionary statements refer to an intact battery.
statements	
	ance with local legislation.
	a well-ventilated place. Keep container tightly closed.
	rom sunlight. Store in a well-ventilated place.
P410+P412 Protect f	rom sunlight. Do not expose to temperatures exceeding 50 °C/122 °F

P410+P412 Protect from sunlight. Do not expose to temperatures exceeding 50 °C/122 °F.

SECTION 3: Composition/information on ingredients

A Lithium-Ion battery is 80% Lithium-Ion cells, 5% other internal components and 15% metallic case. As previously mentioned, Article 7 of REACH Regulation states that batteries do not require registration, this makes communicating the components' hazards optional in order to provide the customer with as much information as possible regarding the harms that might occur in case of wrong usage of the battery.

An asterisk * points out the chemicals listed in Annex VI, while the hazard classes were provided by ECHA³.

Chemical substances of	%	CAS Number	ECHA Classification &
cell, other components			Hazard labelling

and case				
Lithium Iron Phosphate	30-40%	15365-14-7	No hazard classified.	
LiFePO ₄				
Graphite C	10-15%	7782-42-5	No hazard classified.	
Steel	10-20%	12597-69-2	No hazard classified.	
Electrolyte solvent	5-15%	Mixture of the following	See individual characteristics below.	
Ethylene Carbonate C ₃ H ₄ O ₃		96-49-1	Harmful if swallowed. Causes serious eye irritation. May cause damage to organs through prolonged or repeated exposure.	
*Dimethyl Carbonate C ₃ H ₆ O ₃		616-38-6	Flam. Liq. 2	
Ethyl Methyl Carbonate C ₄ H ₈ O ₃		623-53-0	Highly flammable liquid and vapour.	
Li-Exafluorophospate LiPF ₆		21324-40-3	Toxicifswallowed.Causes severe skin burnandeyedamage.Causes damage to organsthroughprolongedthroughprolongedrepeatedexposure.Causesseriouseyedamage.	
Copper metal Cu	5-10%	7440-50-8	Very toxic to aquatic life. Very toxic to aquatic life with long lasting effects. Toxic if inhaled. Harmful if swallowed. Causes serious eye irritation.	
*Aluminium metal Al	2-5%	7429-90-5	Water-react. 2 Pyr. Sol. 1	
Chemical substances of components external to cells	%	CAS Number	Classification & Hazard labelling	
Polyamide C ₆ H ₂₂ N ₂ O ₂	50%	25038-54-4	Causes serious eye irritation and causes skin irritation.	
Silicone (C ₂ H ₆ OSi) _n	50%	7440-21-3	No hazard classified.	

File: MSDS_EK_DG_EN_2.1.doc - Printed on February 25, 2022 @ 12:01 PM by DDD

SECTION 4: First Aid Measures

The hazardous components are contained within a sealed unit. The following measures refers in case the components leak from the battery following a mechanical, electrical damage or exposition to high temperature. Always get medical attention immediately in case of contact with any internal components. General React immediately after getting in contact with the leakage, contact a doctor and show

Advice	them this MSDS.			
Eye contact	Rinse immediately with plenty of water, also under the eyelids. Get medical attention			
	immediately.			
Skin contact	Rinse immediately with plenty of water and soap for at least 15 minutes. Get medical			
	attention, especially if irritation develops and persists.			
Ingestion	Rinse mouth immediately and drink plenty of water, do not induce vomiting. Get medical			
	attention immediately.			
Inhalation	Remove to fresh air. Get medical attention immediately			

Inhalation Remove to fresh air. Get medical attention immediately.

SECTION 5: Firefighting Measures

A Lithium-ion battery fire is a peculiar fire which requires specific firefighting measures⁴: it is recommended to provide the storage facility with early smoke detectors and fire extinguisher either being water mist, extinguish foam or inerting solutions.

Prevention methods are listed in section 7.

Immediately contact firefighters in case of temperature rising.

	1 0		
Suitable Extinguish media	Large quantities of cold water, inerting gas or foams, water mist.		
Unsuitable extinguish media	Acids, Alkalis, sands or oxidizing agents.		
Special Hazard Arising	During a fire, chemicals leaking from the Lithium-ion battery tend to react		
	with water, forming Hydrofluoric acid (HF) and other acids such as PF_6 and		
	POF ₃ ⁵ . Carbon Monoxide (CO) and Carbon dioxide (CO ₂) are produced too.		
Advice for firefighters	Inform the firefighters about the quantity of batteries involved.		
	Wear protection for toxic gases.		
	Cool down the batteries.		

SECTION 6: Accidental Release Measures				
The hazardous components are contained within a sealed unit. An incorrect usage of the product might lead				
to a leakage of the int	ternal components.			
Inform local authorit	Inform local authorities immediately.			
Personal	For non-emergency personnel: wear protective equipment as per Section 8, remove all			
precautions,	ignition sources, evacuate the area in case of leakage of large quantities of chemicals.			
protective	For emergency personnel: wear protective equipment for toxic gases.			
equipment and				
emergency				
procedures				
Environmental	Prevent from migrating into soil, natural waterways or sewers creating barriers.			
precautions	Inform local authorities in case this occurs.

Methods and	Do not directly touch the spilled materials. Train cleanup personnel. Use clay, dust,			
material for	vermiculite or other non-reactive absorbent material to absorb spilled components. If			
containment and	not hot and if possible, cautiously place batteries in containers and/or outside.			
cleaning up	Do not use water for cleaning up.			
Reference to other	See sections 8 and 13 for additional information.			
sections				

SECTION 7: Handling and Storage

See User Manual.					
Adopt preca	Adopt precautionary principle.				
Handling	Usage: Use the battery according to the User Manual.				
	Handle the battery with care.				
	Do not expose the battery to excessive physical shock, vibration, fire or water sources.				
	Do not allow battery terminates to contact each other or with other metals.				
	Do not short-circuit a battery. A short-circuit will generally reduce the cell or battery service life				
	and can lead to ignition of surrounding materials or materials within the cell or battery if the				
	seal integrity is damaged. Extended short-circuits creates high temperature in the cell and at the				
	terminals. Physical contact to high temperatures can cause skin burns. In addition, extended				
	short-circuit may cause the cell or battery to flame.				
	Keep out of reach of children.				
	Charging: Use the battery charger provided by Aliant.				
	Do not use cables, battery charger or other material not provided by Aliant.				
	Disassembly: Do not disassembly the battery by own willing. Seek Aliant instructions.				
	Do not reverse cell polarity within a battery assembly.				
	Do not use old and new cells or cells of different sizes.				
	Unauthorized components: Do not use unauthorized components. Contact Aliant for				
	replacement assistance.				
Storage	Do not store batteries in a manner that allows terminals to short circuit.				
	Do not place batteries near heating sources, nor expose them to direct sunlight for long periods.				
	In case of storage of high quantities of Lithium-Ion Batteries it is recommended, if possible, to				
	store them in more containers rather than in just one.				

SECTION 8: Exposure controls/personal protection

Despite not all components being labelled as hazardous, some Threshold Limit Values (TLVs) available on ECHA or on CDC database⁶ are provided. The following components are not listed on European Directives 2000/39/EC⁷, 2006/15/EC⁸, 2009/161/EU⁹, on the most recent Directive 2017/164/UE¹⁰ and on its Italian

decomposition products

	SECTION 11: Toxicological information				
The following information refers to the single components after a leakage or a fire caused by an incorrect					
usage of the battery. In ca	usage of the battery. In case of a spillage of the components wear proper protection as stated in Section 8.				
Acute toxicity	Components in the electrolyte are toxic if inhaled, causing severe irritation of the				
	mouth and upper respiratory tract with burning sensations, pain and coughing.				
	Toxicity if swallowed might occur with symptoms as nausea, vomiting, diarrhoea				
	and pain in the digestive tract.				
Skin	Electrolyte components are corrosive to skin and cause severe skin burn or sever				
corrosion/irritation	irritation if not washed off immediately.				
Serious eye	Components in the electrolyte cause eye damage irritation that can lead up to				
damage/irritation	irreversible damage with a starting acute burn.				
Respiratory or skin	The electrolyte causes irritation of mouth and upper respiratory tract, with				
sensitisation	burning sensation, pain and coughing.				
Germ cell mutagenicity	OECD Tests do not show correlation between the battery electrolyte and germ cell				
	mutagenicity.				
Carcinogenicity	Some components of the Lithium-ion batteries contain small percentages of				
	metallic Nichel, classified as IARC 2B (possibly carcinogenic to humans). Total				
	percentage of Nichel is approximately less than 1% of the total mass of the battery				
	and might react only after a fire or a chemical abuse.				
Reproductive toxicity	No single component shows effect on reproductive system.				
Specific Target Organ	Electrolyte components are corrosive and causes respiratory irritation if inhaled.				
Toxicity (STOT) - single	Most common symptoms are coughing, burning sensation and pain.				
exposure					
Specific Target Organ	No data available at the moment shows STOT for repeated exposure.				
Toxicity (STOT) -					
repeated exposure					
Aspiration hazard	In case of aspiration the electrolyte components cause irritation to the respiratory				
	system with coughing, pain and burning sensation.				

	SECTION 12: Ecological information		
A sealed battery relea	ased to the environment does not show biodegradation behaviour. In case of leakage,		
single components eco	otoxicity is considered. Follow precautionary principle.		
Toxicity	Copper, LiFePo4 ¹² , Nickel, Ethylene Carbonate, Dimethyl Carbonate, Ethyl Methyl		
	Carbonate and Li-Exafluorophosphate, sealed within the lithium-ion batteries, are		
	harmful for freshwater and maritime environments.		
	No data available for electrolyte components.		
Persistence and	No data available.		
degradability			
Bioaccumulative	No potentials for bioaccumulation are available for the electrolyte components.		
potential			

¹² Shu et al., 2021, Life-cycle assessment of the environmental impact of the batteries used in pure electric passenger cars File: MSDS_EK_DG_EN_2.1.doc - Printed on February 25, 2022 @ 12:01 PM by DDD Pg. **10-14**

ALIANT ULTRALIGHT BATTERY È UN PRODOTTO BY ELSA SOLUTIONS srl - VIA P. PATARINI 15 - 40026 IMOLA (BO) - ITALY Ph. +39 800 132 166 - Cod. Fisc. 02335150377 - P.IVA 00571441203 - Iscr. Trib. n.33973 - C.C.I.A.A n.272440

Mobility in soil	No data available.
Results of PBT and	No data available.
vPvB assessment	
Endocrine	No data available.
disrupting	
properties	
Other adverse effect	In case of fire the internal components react and spread toxic gasses such as HF.

	SECTION 13: Disposal considerations
Appropriate methos of	Lithium-ion batteries are classified with the European Waste Catalogue with
waste treatment	code 160605 (other batteries and accumulators) ¹³ . Consult manufacturer and
	local authorities for the most correct disposal. As required by European Directive
	2006/66/EC ¹⁴ and its Italian transposition D. Lgs 188/08 ¹⁵ , ELSA Solutions is
	registered at the National register of producers of batteries and accumulators
	(CDCNPA).
Physical/chemical	Handle with care in order not to damage the battery, do not release to the
properties	environment.
Inappropriate procedures	Do not dispose in the sewage or to the environment.
Special precautions	Store in cool environment, protect from sunlight, weathering and heat sources
	and handle with care. In case of leakage, if not hot and if possible, cautiously
	isolate the battery and consult manufacturer and local authorities.

SECTION 14: Transport information

Aliant Lithium-ion cells and batteries can be shipped as Fully Regulated Dangerous Goods with code **UN3480** and **UN3481** when packed with or in equipment, because they met the criteria referred for Lithium Batteries **over 100 Wh** in the UN Manual of Test and Criteria 7th revised edition, Part III, Subsection 38.3. In the US Lithium-Ion battery transportation is regulated by Part 49 of the Code of Federal Regulations (49 CFR Sections 105-180) of the US Hazardous Material Regulations.

	SECTION 15: Regulatory information
Canadian Federal	This product has been classified in accordance with the hazard criteria of the CPR and
Regulations	the MSDS contains all of the information required by the CPR.
US Federal and State	Lithium-Ion batteries are not considered "articles" by OSHA and are thus subject to
Regulations	HCS regulations, MSDS are required.
Chinese Regulations	General Rule for Classification and Hazard Communication of Chemicals (GB13690-
	2009).
REACH Regulations	ELSA Solutions imports into Europe only finished components ("Articles") not
	intended to release substances during their use. The articles do not feature
	substances of very high concern or any restricted substance, thus ELSA Solutions
	does not need to register them.

	SECTION 16: Other information
Revision information	Version 2.1 adds information to the data provided by version 1, as requested by
	Commission Regulation (EU) 2020/878.
	Every section had been revisited and updated.
Legend to abbreviations	ADN - International Agreement for the Transport of Dangerous Goods by
and acronyms	Inland Waterways
